

Authorised Drainlayers and Water Supply Installers, please take note of the following matter.

Only use Three Waters & Waste Unit stamped construction drawings for carrying out work on CCC infrastructure or on infrastructure that will be vested in Council

Council's Three Waters & Waste (3WW) Unit had several situations where significant lengths of water main had been installed or were about to be installed without 3WW consent. In another case a wastewater vacuum system was installed without 3WW consent. In some cases incorrect pipe materials and sizes were specified and the construction drawings had no reference to Council's Construction Standard Specifications (CSS) and Infrastructure Design Standards (IDS).

Since Council will eventually own these new pipes and systems it is important that they meet Council specifications and requirements.

It is therefore essential that any work on CCC infrastructure or infrastructure that will be vested in Council only takes place when:

1. Plans have been reviewed and accepted by Council's Three Waters & Waste Unit. This will be via stamps on the construction drawing(s).
Only proceed with the work when one of the following stamps is present on the drawing(s):

For the installation of:

- all wastewater gravity mains and laterals 150mm diameter and greater
- wastewater laterals 100mm connecting into a wastewater structure (manhole) or connecting directly into a wastewater main 375mm or greater, or into a brick barrel sewer
- all wastewater structures
- vacuum systems
- pressure systems including onsite pressure sewer tanks

Actual stamp will have:

- Acceptance date
- CCC staff name

Remember that 48 hrs notice via an email to ad@ccc.govt.nz is required before starting work on site:

For the installation of **all water supply work**:

Actual stamp will have:

- Acceptance date
- CCC staff name

For the installation of **stormwater laterals 100mm diameter connecting into a stormwater brick barrel, for gravity mains and laterals 150mm diameter and greater and all stormwater structures and pumped systems**:

Actual stamp will have:

- Acceptance date
- CCC staff name

For plans that provide **combined** acceptance for 3 Waters infrastructure (wastewater, water supply and stormwater):

Actual stamp will have:

- Acceptance date
- CCC staff name

A CCC Building Consent stamped plan shall not be used for the installation of wastewater gravity, wastewater pressure, wastewater vacuum, water supply and stormwater assets.

2. The drawings specify the following:

- Pipe size and material
- Dimensions
- Pipe grade (if applicable)
- References to the CSS and IDS

Also ensure that after completion of the work the appropriate as-built information is submitted to Council as per Council's requirements.

Thank you for your cooperation.
