

Transitional Plan Update #10 – Organics Processing Plant

4 October 2021 – 17 October 2021

Actions in this plan cover a transitional period until proposed upgrades can be completed at the Christchurch City Council composting facility located in Metro Place, Bromley. Please find below an update on each of the key objectives outlined in the Transitional Plan.

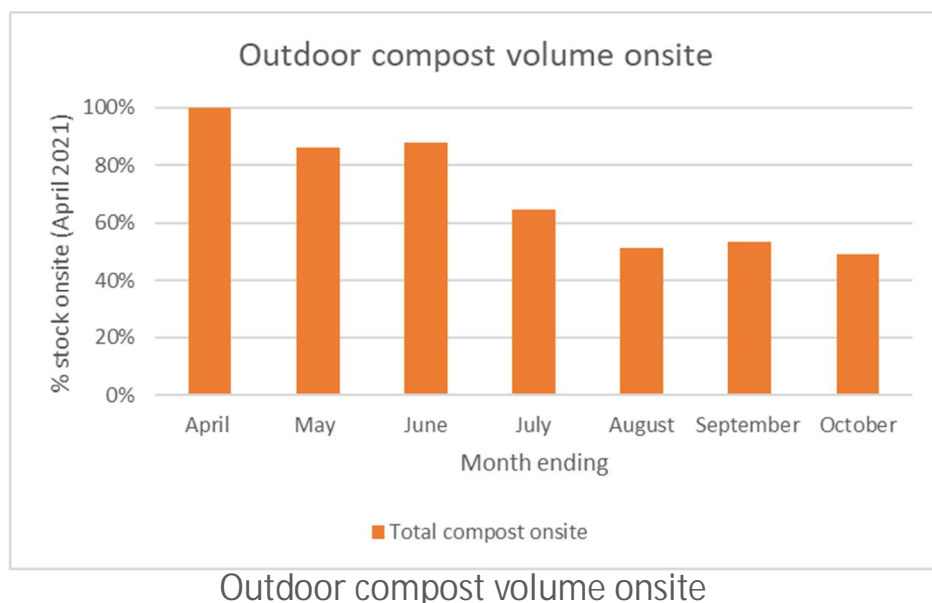

1. Stop receiving pre-consumer food organics.

Pre-consumer food organics have not been accepted at the Organics Processing Plant since 23 December 2020.

Date	Tonnes of pre-consumer food waste received
28/06/21 – 11/07/21	0
12/07/21 – 25/07/21	0
26/07/21 – 08/08/21	0
09/08/21 – 22/08/21	0
23/08/21 – 05/09/21	0
06/09/21 – 19/09/21	0
20/09/21 – 17/09/21	0

2. Minimise the onsite storage of finished compost by prioritising the screening and removal of finished product from the site.

Living Earth is currently removing the majority of stockpiled material from the site. As of 17 October 2021, the total material onsite had reduced by 51%, shown in the graph below. The next phase of the process will entail removing all outside processing of material.

*Figures up to 1 October.

3. Install a time-lapse camera so that residents can see the reduction in outdoor storage

The camera has been regularly recording time-lapse data which is regularly updated on the website. See below the image from 18 May 2021 compared to 17 October 2021.

Before:

Now:

4. Maintain effective treatment of processing air, including maintenance of bio filter.
5. The biofilter is working well since work was completed in May and the improved backpressure and airflow rates have been sustained. Temperature and back pressure is being monitored.

6. Investigate additional buffering, including boundary plantings, along the southern site boundary.

Additional plantings are planned around the boundary of the composting facility to provide an additional natural buffer around the site. This includes plantings on land to the south of the facility that is currently leased so agreement from the lease-holder will be obtained.

The Parks Team has provided a list of appropriate species for the area and we are now developing a broad plan for planting at the organics plant and neighbouring transfer station.

7. Maximise stability of compost onsite.

Living Earth initiated a trial of a probiotic additive to the compost. The trial was to establish if this additive will accelerate the composting process. The trial was successful and we are looking at using the probiotic as a permanent part of the process going forward.

8. Address community concerns and keep the community informed via regular community meetings and an information newsletter.

Communication with the community happens regularly via newsletters, fortnightly website updates, and community meetings. The next community meeting is scheduled for 16 November 2021, with planning underway.

9. Organics plant upgrade project update

After the Council meeting on 9 September 2021, officers have commissioned a feasibility study to investigate building a new facility at another location. This is currently underway and will be reported back to Council in March next year. This will include upgrading the existing site as an option if no other site is viable.
